

■■■ CREWBOOK · USER GUIDE

How to use CrewBook.

Every page of the app, step by step — the calendar and Day View your office runs on, WhatsApp briefs to the crews, holidays and wages, expenses and mileage, purchase invoices and Costings, and the sales area built in. Each chapter ends with fixes for the things that trip people up.

Updated **September 2026** Applies to **CrewBook on the web and installed**

1. What CrewBook is

CrewBook is the day-to-day book your office and site teams work from. Each day has a list of jobs; each job has its crew, materials, plant and subcontractors. The same data drives wages, expenses, purchase invoices, the per-contract P&L and a live map of where tomorrow's work is — and the sales side (leads, quotes, contracts, invoicing and credit control) is built in as its own Sales area.

Everything is shared across every signed-in person in your company, live: when a colleague books a job or approves a claim, your screen catches up by itself. What each person can see is controlled by their access tier.

The calendar's week view — the page most of the firm lives on.

READING THIS GUIDE

Names in boxes, like **Add Job**, are the exact buttons and fields you'll see in the app. Paths like **Settings → Users and access** mean: open Settings (a tile on the **More** sheet), then find that panel. The search box in the contents panel searches everything in this guide, including the troubleshooting entries.

2. Creating your account and signing in

Everyone gets their own personal login. Sign up with an email address and password (verified by a 6-digit emailed code), or in one step with [Continue with Google](#), [Microsoft](#), [Facebook](#) or [Apple](#).

- 1 Go to crewbook.me (<https://crewbook.me>) and click [Start Free Trial](#) — or, if you're joining your firm's existing CrewBook, use the sign-up link and the *exact email address your invite was sent to*.
- 2 Enter your [Email](#), [Password](#) and [Confirm Password](#), and click [Create account](#) — or use one of the [Continue with...](#) buttons.
- 3 Type the 6-digit code from the [Verify your email](#) screen and click [Verify](#).
No code? Click [Resend](#) and check spam.

THE COOKIE BANNER, AND WHAT “ACCEPT ALL” NOW MEANS

On your first visit CrewBook asks about cookies, with two buttons: [Essential only](#) and [Accept all](#). Essential cookies keep you signed in, remember which company you're working in and hold short-lived view preferences; they are always on. [Accept all](#) turns on **Google analytics and Google advertising cookies together** — it grants all four of Google's consent signals at once (analytics storage, advertising storage, advertising user data and ad personalisation), which both measures whether CrewBook's adverts lead to sign-ups *and* lets Google show you CrewBook adverts on other websites (remarketing). [Essential only](#) refuses all four and leaves only the essential cookies; there is no partial option, and nothing about the app works differently either way. Your choice is stored in that browser only and never sent to us — so you'll be asked again on another device or after clearing site data.

CHANGING YOUR MIND LATER

The banner doesn't come back by itself. Open **Account** → **Privacy Policy**, scroll to **Cookies and Similar Technologies**, and click [Change your cookie choices](#) — that clears the stored choice and puts the banner back up so you can pick again.

Forgotten password? Click [Forgotten your password?](#) on the sign-in page, enter your email, and follow the emailed link to set a new one. If you originally signed up with Google,

Microsoft, Facebook or Apple, there's no CrewBook password to reset — use the same

[Continue with...](#) button every time.

If something's not right

- **"Invalid email or password" when logging in**

Wrong credentials — or the account was created with a social provider rather than a password.

Check the address, try [Forgotten your password?](#), or sign in with the [Continue with...](#) button you originally signed up with.

- **"Invalid verification code" when signing up**

The code was mistyped or has expired.

Re-enter it carefully, or click [Resend](#) and use the code from the newest email.

- **"Invalid reset link" when resetting a password**

The link was cut short by email software, or has been used or expired.

Click [Request a new link](#) and use the newest reset email — copy the whole link into the address bar if clicking doesn't work.

- **"This login isn't registered for CrewBook"**

The login you're using isn't registered for the app.

Check you signed in with the right address, ask your administrator to send the invitation again, or sign out and sign back in.

- **The cookie banner has gone and you want to change your answer**

The banner only shows until you press one of its buttons; the answer is then stored in that browser.

Go to **Account → Privacy Policy**, find **Cookies and Similar Technologies**, and click **Change your cookie choices**. The banner comes back and your next press replaces the old answer. Clearing the site's stored data does the same thing.

3. Your company, the setup wizard and subscribing

Every login belongs to exactly one company. The *first* person from your firm creates it — everyone else joins by an administrator's invite and should **never** create a company of their own (that gives them a separate, empty workspace). Creating the company starts the whole team's 14-day free trial, no card needed, and makes you the Owner with Super Admin access.

The setup wizard

After creating the company, a six-step wizard configures it. Progress saves on every **Next**, so you can stop and come back — and you can go through it again any time from **Settings → Run setup again**.

- 1 **Company Details** — company name (required), logo, contact details and address.
- 2 **Job Types** — the pick-lists offered when creating jobs. It starts with Groundworks, Tarmac, Concrete, Drainage, Roofing and Fencing plus categories (Preparation, Main Works, Finishing, Remedial, Survey); add your own with Enter, remove with the x. Editable later in Settings.
- 3 **SharePoint** — optional: "CrewBook can file the sales documents it produces onto your site, and can keep your nightly backup there". Choose **Yes, we use SharePoint / Microsoft 365** and enter your SharePoint site name (the word or two CrewBook matches to find your site), or **No, we don't use SharePoint** ("Keep documents and backups in CrewBook or on Google Drive instead"). You must pick one; you can change it later.
- 4 **Add Workers** — your first team members (name and phone). The rest can be added later on the Crew page.
- 5 **Notifications** — who gets emailed about what: holiday approvals and reminders, weekly wages, new suppliers, new clients, photo uploads. Leave a field blank to disable that notification.
- 6 **Optional Features** — **WhatsApp job briefs** (needs a one-off setup from **Settings → Integrations** afterwards, about 20 minutes) and **Daily Google Drive backups** (nightly export of the whole database — works as soon as it's on).

You can **Skip setup** at any step and finish later in Settings — the app works either way.

The trial and subscribing

When the 14-day trial ends (the last day is included), everyone in the company sees the subscribe screen, **Keep your company on CrewBook**, until someone subscribes. Press **Subscribe now**, go through the secure checkout, and you'll see "You're subscribed": the whole company is back in straight away. It's £55 a month for the whole company, including VAT, for as many people as you like, and you can cancel whenever you like. Adding staff never raises the price.

In the last ten days of the trial, CrewBook reminds you once each visit when the trial ends, with **Subscribe now** and **Maybe later**. Subscribing early costs nothing extra: nothing is charged until the trial is over. The reminder emails open the same subscribe screen.

There are two ways to subscribe, both £55 a month, and either one opens CrewBook for the whole company everywhere — on the web, on Android and on iPhone:

- **On the web or on Android**, with **Subscribe now** and the secure checkout, as above.
- **In the iPhone app**, through an Apple subscription. It's billed by Apple and managed in the Apple Account that bought it: whoever took it out changes or cancels it in the iPhone app, or in their Apple Account under Subscriptions. While it's running, the subscribe screen and the Account page say "Your company subscribes through the iPhone app", and there's no checkout to go through.

One subscription is all a company needs. If an Apple subscription lapses, whoever took it out can renew it in the iPhone app, or anyone can subscribe on the web instead.

If something's not right

- **You were invited, but you see "Create your company"**

The invite hasn't been sent yet, or went to a different email address — invites are matched by email.

Don't create a company. Ask your administrator to (re-)send the invite to the exact address you log in with, then log out and in again — you'll be attached automatically.

- **The setup wizard keeps reopening at every login**

Setup was never finished or skipped.

Click through to **Finish**, or click **Skip setup** — both mark it complete.

- **"Run the setup wizard first to create your company settings..."**

The company settings record doesn't exist yet, so the Lists and options panel has nothing to save to.

Open **Settings** → **Run setup again**, complete (or skip) the wizard, then come back.

- **Everyone suddenly sees the subscribe screen**

The trial has ended, or the subscription was cancelled.

Have someone press **Subscribe now** and complete the checkout — the whole company is back in as soon as the payment confirms. Stuck on "Confirming your payment..."? It re-checks every few seconds, and you can safely close the page — activation happens automatically. If your company subscribed through the iPhone app, the screen says so: whoever took it out can renew it there, or you can subscribe here instead.

4. Your team and who sees what

Staff are invited from **Settings → Users and access**: type their email, pick a tier, click **Invite**. If the address already has a CrewBook login it joins your company immediately; otherwise they're attached automatically the first time they sign up with that email.

WHO MAY SEND AN INVITE

Only the company **Owner** — whoever created the company — or someone on the **Super Admin** tier. For anyone else the invite box isn't shown at all, and the panel says to ask the owner instead: there's no form to fill in and be refused. Admins can still set tiers, page chips and linked workers on people already in the company; it is adding a new person that is reserved.

ACCESS TIER	WHAT THEY SEE BY DEFAULT
Super Admin	Everything, always — page chips can't lock them out. The only tier with the Data Explorer. The company creator starts here.
Admin	Every page, including Settings, Backups, Costings and Sales; can manage existing users' tiers and permissions, though sending a new invite is the Owner's or a Super Admin's job.
Office Staff	Today, Calendar, Day View, Credit, Invoices, Crew, Holidays, Mileage, Message Delivery, the User guide and Account.
Site Staff	Today, Calendar, Day View, Holidays, Mileage, the User guide and Account — built for crews checking the day's work from a phone.

Beyond the tier, each user's row has a **Permissions** expander with **page chips** — filled = visible, plain grey = hidden — so an Office Staff member can be granted Wages, or Sales (the **QCI Sales** chip), as an exception. The chips keep the pages' old names — Dashboard for Today, Workers for Crew, Petty Cash for Expenses, Mileage Log, Live Map, Admin Settings for Settings, Backup and Guide — so look for those. The **Claim a receipt** switch lives there too: it lets someone send in expenses from Today without seeing the

Expenses page, and it starts on for everyone. The **linked worker** dropdown sits on the user's row itself, next to the tier — it ties a login to its record on the Crew page. Every signed-in user always has their Account page — it can't be revoked.

CHIPS RESET WITH THE TIER

Changing someone's access tier resets their page chips to that tier's defaults. Set the tier first, then re-apply any custom chips.

5. Finding your way around

The navigation floats over every page. On a tablet or computer it's a glass pill along the top: **Today**, **Calendar**, **Day View**, **Credit**, **Invoices**, **Sales** and **More**. On a phone it's a capsule along the bottom with Today, Calendar, Day View, Sales and More, and Credit and Invoices are in More. Where the pill hasn't room for every name, it shows the name of the page you're on and icons for the rest.

More holds every page you may open, each as a tile in its own colours, under three headings: **The book** (Today, Calendar, Day View, Credit, Invoices and Sales), **Team** (Crew, Holidays, Wages, Expenses, Mileage, Message Delivery and Map) and **You and the company** (Settings, Account and the User guide). Underneath are **Appearance**, which steps through automatic, light and dark, and **Log out**. On a tablet or computer, the round button with your initial at the top right opens the same sheet.

Some pages have new names, to match what they say at the top: Today was the Dashboard, Crew was Workers, Expenses was Petty Cash, Mileage was the Mileage Log, Map was the Live Map, and Settings was Admin. Sales is an area of its own, and Costings is a tile inside it.

- You only see the pages your tier or custom permissions grant — a missing tile usually means a missing page chip, not a fault.
- The round **magnifying glass** at the top right, or Ctrl K (⌘K on a Mac), opens job search. Type a client, a site or a contract number, and pick a job to open its day in Day View.
- Each page carries the CrewBook name and its title, and a round back button beside the name whenever there's somewhere to go back to. It steps back one page exactly as the browser's own back button does, so following a search result or a job link and coming back is one press. It hides itself when there is nowhere to go back to — the first page of a session, or a link opened straight into the app. The Calendar's always goes to Today, and Day View's to the Calendar (or back to Invoices, if that's where you came from).
- On a tablet or computer most pages open as two pages side by side, like a book, and each side scrolls by itself. On a phone they become one page.
- Like CrewQCI, the app installs from the browser: **Account** → **Install the app** (on iPhone: Safari's Share → Add to Home Screen).
- The **?** button at the top right opens this guide at the chapter for the page you're on — and in the Sales area it opens the CrewQCI guide instead, where the sales side is

documented in full. The in-app [User guide](#), in More, is a condensed version.

How it behaves on a phone

- **Swipe back closes what's open.** Swiping back (or the Android back button) while a dialog is open closes the dialog rather than leaving the page — so a half-filled job or claim is no longer lost by the gesture you'd naturally use to dismiss it.
- **Dropdown lists rise from the bottom.** Any list you pick from opens as a sheet pinned to the bottom of the screen, where the keyboard can't cover it, with the options spaced for a thumb.
- **Pull down to refresh.** From the top of any page, pull down to refetch everything on screen. It does nothing while something is still saving, so a refresh can never overwrite a save in progress — pull again once it has saved.
- **Registers remember where you were.** A table's search text and column filters survive switching to another page and coming back.
- **Small buttons are easier to hit.** Icon buttons carry an invisible 44-pixel target, so the tap area is bigger than the icon looks.

6. Today

Today (it used to be called the Dashboard) is the "what needs my attention right now" page. It greets you with the date and your company's name, and on a tablet or computer it's two pages side by side; on a phone the same things follow one another down the screen.

Today — the day on site on the left, what's waiting on you on the right.

The dark left-hand page is the day on site:

- **The nut** — the number of jobs today, filling as the day's loads arrive, beside how many people are out on site and how many loads are in. Cancelled and provisional jobs aren't counted, though they're still among the cards, marked. A line underneath adds up what's booked for today.
- **On site today** — today's jobs as cards, each with its crew and when its loads are due. Press one to open it in Day View.
- **Today's loads** — every load due today in time order, with its material, client and supplier; one that isn't booked yet says so. Press a load to open its job.

The right-hand page is what's waiting on you:

- **Needs you**, behind the orange hazard stripe — up to five rows, each there only while it has something in it:
 - **people not told about tomorrow** — everyone on tomorrow's jobs who hasn't had their WhatsApp brief yet;
 - **orders not booked** — every material, hired plant item and subcontractor for this week *and next* that isn't marked as booked: a forward-looking ordering checklist;
 - **clients with credit to check** — upcoming jobs whose credit status still says "Needs checking" or "No credit";
 - **jobs not yet invoiced** — jobs dated before the end of this week with no invoice issued (remedial jobs left out), grouped by client;
 - **provisional jobs to firm up**.

Press a row and its list opens in place; press anything in the list to go to that job or day.

When all five are clear it says "All squared away".

- **Claim a receipt** and **Log a journey** — a quick expense claim, and the way into Mileage. Claim a receipt shows for anyone whose Claim a receipt switch is on.
- **Your claims** — your own expenses, as waiting, on its way, paid and turned down. Press a figure to see the claims behind it.
- **Tomorrow** — tomorrow's jobs and who's on them — and **Away in the next fortnight**, who is off over the next two weeks.
- The year's tonnage by supplier, **Paver days** for this month and the two before, and **Recent site photos** — a month of uploads from site, with a full-screen viewer and **Download all**. The tonnage and paver panels only appear once they're set up in Settings.

The Dashboard's expand buttons and the pop-ups they opened have gone: every list opens in place.

7. Calendar

The Calendar is the central schedule — **Month** or **Week** view (a phone shows the week only), one card per job per day, with today circled in orange, weekends shaded and closed days hatched. Cards carry the client and site, the contract number, the coordinator's initials, a status badge (**Under way**, **Completed**, **Cancelled** or **Provisional**), a worker-count badge ("3/4" — green when full, amber when short) and a materials badge (amber until everything's booked, then green); the people wanted and the delete × sit at the foot of the card. On a wide Week view the crew's faces show too, and on a phone each card leads with its category nut. Card colours follow the job category — Preparation amber, Hand Lay green, Machine Lay blue, and everything else grey as Other; provisional and cancelled cards are grey too — and a red **R** (or **Remedial**) chip marks remedial work. The green **+N** pill in the corner of a weekday in Month view (beside the date on a phone) is spare capacity: your available workforce minus everyone off or already spoken for.

Week view — pressing any day opens it in Day View.

Adding a job

- 1 Press **Add job** and set the **Job date** — or press **Several days?** and set the first and last day; the sheet confirms "This will add a job on each of N working days. Weekends and closed days are left out."
- 2 Type into **Find the contract** ("Contract number, client or site") — it searches **your own contract register** as you type, listing each match as its contract number with the client and site beneath. Picking one auto-fills the contract number, client, site, coordinator and contacts. Otherwise fill the fields by hand.

This used to read from SharePoint, which meant no lookup at all unless you happened to keep a Contracts list there. It now reads the register you actually maintain, so it works for everyone.
- 3 Add the **Full address** (this is what puts the job on the Map and behind the Maps links), **What3Words** and contact details.
- 4 Pick a **Job category** and **Job co-ordinator**, set **People wanted**, tick **This is a remedial job** if it's a return visit, and press **Add job**.

Provisional bookings

Work that isn't signed off yet is pencilled in with **Provisional** (the **Provisional booking** sheet, then **Pencil it in**) — no contract number needed, just a client and/or site and the dates. Provisionals show as grey dashed-border cards with a grey **Provisional** badge. When the job is confirmed, press the green **Confirm** on the card (in Day View, **Convert to a job**), look up (or type) the contract number in the **Confirm as a job** sheet, and resolve any differences it flags between **As pencilled in** and **From the contract**; then press **Confirm job**. Costs booked on a provisional follow it into Costings once it has its number.

In the **Confirm as a job** sheet, the **Full address** field has a **Use the client's address** button beside it, which pulls the postal address straight off the client's account rather than making you re-key it. It fills in as one line, and you can edit it afterwards like any other address. It needs a client name in the sheet, and an address saved on that client's account.

Rescheduling, deleting and closed periods

- **Drag to reschedule** — drag a card (on touch screens, from its ☰ grip) onto the new day. Workers, materials, hires, subs and plant all move with it, and the toast has an undo.

- **Delete** — the small x at the foot of the card, with a confirm; the undo in the toast restores the job and everything attached.
- **Closed periods** — the **Closed days** button (on wider screens) manages bank holidays (set up automatically) and your own shutdowns, added with **Add closure**. Closed days are hatched, are skipped by multi-day bookings, and refuse dropped jobs. Booking a single job on a closed date warns but doesn't block.

If something's not right

- **The contract search says "No contract matches that."**

Nothing in your contract register matches what you typed. The lookup searches contract number, client and site, and only contracts that exist in the QCI contract register can be found.

Try fewer characters, or the client name instead of the number. If the contract genuinely isn't on the register yet, fill in the **Contract no.** and the other fields by hand and add the contract in QCI afterwards.

- **A job can't be dropped on a particular day**

That day is inside a closed period.

Pick another day, or adjust the closure under **Calendar → Closed days**.

- **"Failed to create job / move job / delete job — please try again."**

The save didn't reach the server — usually a connection blip. Nothing half-happened; the screen reverts.

Check your connection and retry.

- **No green "+N" capacity number on a day**

Capacity only shows on open weekdays with active workers set up, only when there's a surplus to show, and not in the wide Week view.

Nothing is wrong — a missing badge means a weekend, a closed day, no spare workers, or that you're in Week view on a wider screen (switch to Month).

8. Day View

Click any day and you're in Day View: every job on the date, each with its workers, materials, plant, subcontractors and hires shown as chips you can tick, drag and click. This is where the day actually gets run.

Assigning workers

- 1 The **Not on a job** pool at the top holds everyone available today who isn't on a job yet.
- 2 Drag a name onto a job — or click several names to select them, then click **+ Add** **N** on the target job. Drag chips *between* jobs to move people.
- 3 Click a worker's name on their chip to set their **shift** (0, ⅓, ½, 1, 1½, 2), their job order for the day, and the **Driver** tick.

Shifts drive wages — and a worker on two jobs in one day is split ½ and ½ automatically.

SETTING A SHIFT TO 0 GIVES THE DAY BACK TO THE OTHER JOBS.

If someone was down for two jobs at ½ each and didn't end up going to one, set that one to 0 — the other returns to a full shift on its own, so wages don't pay half a day for a full day's work. Set a third job to 0 and the remaining two go to ½ each. Shifts you've set by hand to 1½ or 2 are never touched.

Chip colours carry live information: blue = WhatsApp brief sent, green = brief read, amber = the worker has a day status (sick, holiday...) and probably shouldn't be on the job.

Booking materials, plant and subs

Every material, hired plant item, subcontractor and other cost has a round booking mark — amber until you press it once the order is actually placed, then green with a tick. These marks drive the *orders not booked* row under Needs you on Today, which counts the materials, hired plant and subcontractors among them. A **Split load charge** is the one exception: it sits under the material it belongs to and its mark mirrors that material's — book either one and both are booked. Booking a material opens inline boxes for the order reference and delivered quantities on every material, whoever the supplier is, so tonnages

can be trued up after the day. An amber  triangle on a chip means it carries a note — tap to read it.

When you type a supplier name that isn't on file, CrewBook checks for near-misses first — typos, part-names and spacing differences, so "FM Conway" finds "F M Conway Ltd". Any it finds are listed under **There are suppliers with a similar name. Is it one of these?**, and the add button reads **None of these: add "... as new** so you have to mean it. While that list is showing, pressing Enter won't create the supplier. The client name on a job does the same, offering a **Did you mean:** row of existing accounts before it raises a new-client request.

Each job card also carries its **credit status** badge (press to change — Credit needs checking, Credit OK, No credit, Payment upfront, Special authority) and its **invoice status** badge (Not invoiced red, Draft raised blue, Invoiced green, Proforma amber) — press it to set the status and which job days it applies to. Both feed the lists under Needs you on Today.

If something's not right

- **A worker isn't in the Not on a job pool**

They're already on a job today, they have a day status (holiday, sick...), they're marked monthly-paid — or, on a weekend, they haven't been marked available.

Check the **Away or elsewhere** panel and, at weekends, **Free to work this weekend**; remove the status or mark them available.

- **A plant item has gone red with "3/2"**

More of that plant item is assigned across today's jobs than the company owns.

It's a warning, not a block — take the plant off one of the jobs, or arrange a hire.

- **"Failed to save — please try again."**

A change didn't reach the server; the screen reverts to the previous value so nothing is half-saved.

Retry once you're connected.

- **"[Worker] is already on this job"**

The name was dragged or tapped onto the same job twice — CrewBook refuses the second one rather than showing the worker on the job twice.

Nothing to fix; the worker is already there. To move them elsewhere, drag their existing chip to the other job.

- **Booking a split load charge books its material too**

The charge has no booked state of its own: its mark shows the material's, and pressing either books both.

That's deliberate — the charge belongs to the material it sits under, which is also why it's kept out of the loose daywork and haulage chips. Both turn green, but the orders not booked row on Today only ever counted the material.

9. The job editor

Press **Job Edit** on any job card to open the full editor — a large window with a row of tabs across the top, each showing a count when it has anything in it: **Summary**, **Job setup**, **Workers**, **Own plant**, **Materials**, **Hired plant**, **Subcontractors**, **Other costs** and **Media**.

The job editor — one window for everything on one job, one day.

- **Summary** — the job at a glance: badges, the invoicing row with its status badge, the **Raise a draft document** link (see the Sales area), a panel for each section with an **Open** shortcut, and the editable amber **Site notes** panel — those notes show on the Day Overview and go out in the WhatsApp brief.
- **Job setup** — press any row to edit the client, contract number, site, coordinator, address, What3Words and contacts. Changing the contract number offers to apply it to the site's other days and stamp it onto linked costs; editing the site or client on a numbered contract syncs across its other days automatically. Job actions live here too: **WhatsApp**, **the crew**, **Move day** (everything moves with it), **Add another day** (same details, fresh costs), and, under **Take care**, **Cancel job...** with a reason (stays on the calendar, struck

through, reinstatable) or a two-step permanent delete (**Delete job...**, then **Yes, delete it for good**).

- **Workers** — the gang with shifts, driver ticks, and subsistence/hotel allowances per worker.
- **Own plant** — tick the company plant on site (Big plant, Smaller plant, Incidentals and tools, Anything else). Picking a paver adds its usual rollers and opens the haulage form — movement, quoted cost (auto-filled), from/to, and an invoice check. **Changes here only save when you click** **Save plant**.
- **Materials** — orders with supplier, quantity, unit and price; **From the yard** for own stock; **Split load** for two materials on one wagon — its charge line is added automatically, stays tied to that material and follows the material's **Booked** badge rather than having one of its own. Where a day has more than one split load, each charge is matched to its own material by order reference first and then by supplier, so editing one load's supplier or order reference updates the right charge instead of the first one found; delivery times with an auto-fill for multi-load tonnage runs; daywork charges; and a per-item **invoice check** — enter the invoiced figures and the icons tell you green = matches, amber = under, red = over. **Contra charge** records a credit note due from the supplier.
- **Hired plant / Subcontractors** — rates, ordered prices and invoice checks. Setting a hire's from/to dates puts it on every job day it spans; **Invoice logged elsewhere** and **Does this invoice belong to another day?** stop a multi-day invoice being counted twice. Ticking **CIS deductible** on a sub shows the 20%-of-labour deduction live.
- **Other costs** — grab lorries, testing, traffic management, drawings, with the same booking and invoice checks.
- **Media** — photos, videos, sign-off sheets and documents uploaded from site; notes, category badges, automatic compression, and one summary email per batch to the office. Uploads show on Today for a month. See notes on site photos below.

CANCEL, DON'T DELETE

A rained-off job should be *cancelled* (it keeps its record and history, and can be reinstated) or *moved* — deleting removes the day and everything on it. When you do need to move work, always use **Move day** or the calendar drag rather than recreating the job: moving carries every linked record with it.

Notes on site photos

The **Notes, if there are any** box in the **Photos and files** panel on the **Media** tab records what was done on site. There are two ways to use it, and they behave differently:

- 1 Type the note *before* uploading, then upload as normal. The text is saved onto every file in that batch, shows under each thumbnail, and is included in the upload email.

The box keeps what you typed, so the same note carries to the next batch until you change it.

- 2 Type the note and press **Save note**. The note is saved on its own and appears in the **Saved notes** list underneath, stamped with the date and who wrote it. The box clears, and the office gets a short follow-up email.

Use this for anything you think of after the photos have gone up.

Every note in **Saved notes** can be removed with the bin beside it. Removing a note leaves the photos untouched.

WHICH ONE DO I WANT?

If you're describing the photos you're about to upload, type the note first and upload. If the photos are already on the job, use **Save note** — it's the only way to add or correct a note after the fact.

If something's not right

- **Plant changes disappeared**

The Own plant tab only saves when **Save plant** is clicked.

Re-select the plant and click **Save plant** before leaving the tab.

- **"Updated this day, but N of M other day(s) on contract X didn't sync. Please refresh and retry."**

A shared detail saved on this day but failed to copy to some of the contract's other days.

Refresh the page and make the same edit again — only the failed days need the retry.

- **Rows in Job details won't open for editing**

The job is cancelled — cancelled jobs are read-only.

Click **Reinstate job** first if the details need changing.

- **The editor closed by itself**

A teammate moved the job to another date, or deleted it, while you had it open.

Find the job on its new date via the Calendar and reopen it.

- **Files uploaded from site but no email reached the office**

No photo-upload recipients are configured.

An admin adds recipient addresses in Settings. The files themselves are already safely on the job — the email is only a notification.

- **A note I typed isn't in the Saved notes list**

A note typed and then uploaded is saved onto the files themselves, not as a note in its own right — the two are recorded separately.

Look under the thumbnails: the text is there on each file from that batch. To have it in **Saved notes** as well, type it again and press **Save note**.

- **Saved a note but the office didn't get an email**

The follow-up email goes to the same recipients as the photo-upload email, and none are configured.

An admin adds recipient addresses in Settings. The note itself is saved either way — it's showing in **Saved notes**.

10. WhatsApp job briefs

The brief sends each worker their day on WhatsApp: site, client, address with Maps and What3Words links, the crew list, plant, materials and notes. Messages go from your company's own WhatsApp number (see integrations), and delivery feeds back into the app — a worker's chip turns blue when the message arrives and green once it's read.

Hired plant and subcontractors booked as a date range are listed on every day of that range, not only the day the booking starts — so the middle of a week-long hire reads correctly. Tools and plant fall back to what is booked on the job itself when no plant record has been saved for that day, so the brief matches the job card rather than saying "N/A".

WhatsApp the crew — check the message and recipients, then send.

- 1 Get the job right first — workers, materials, notes — because the message is built from what's currently recorded.
- 2 Click the green **WhatsApp** button on the job card (or **WhatsApp the crew** on the Job setup tab).

- 3 Check the recipients — every assigned worker plus the coordinator, pre-ticked. Untick anyone, or **Add someone from the crew list**.

The message itself is the approved template and can't be edited per send.

- 4 Click **Send** and look for "WhatsApp sent to N recipient(s)".

THE HABIT THAT MAKES IT WORK

Send briefs the afternoon before. Today is the checklist: while anyone on tomorrow's jobs hasn't been told, the first row under Needs you says how many people. Once that row has gone, everyone knows where they're going in the morning.

If something's not right

- **"Failed to send to: ..." for some workers**

Those individual messages didn't go through — a bad or missing number, or WhatsApp rejected them. The rest were sent.

Check the worker's phone number on the Crew page, then reopen the preview and send to just the failed people.

- **"No phone numbers found"**

None of the assigned workers (or the coordinator) has a phone number recorded.

Add numbers on the Crew page — messages can only go to your own personnel, never to arbitrary numbers.

- **No WhatsApp buttons anywhere**

WhatsApp is switched off for your team, or hasn't been set up yet.

An admin enables it and completes the one-off Twilio setup under **Settings → Integrations** — see integrations.

- **The preview shows an error with a Try again link**

The preview couldn't be generated — a connection or sign-in blip, common on iPhones.

Press [Try again](#); the app also retries by itself a few times.

11. Appointments, absences and weekends

These panels live on the Day View page itself, alongside the jobs.

Appointments

Non-job visits — quotes, measure-ups, meetings — grouped by the person attending.

Click **Add**, fill in the **Site or place (needed)**, pick the time — **Start off job** (visits on the way to the job, ordered #1/#2/#3), **AM**, **PM**, **A set time** or **No set time** — and choose who's going under **Who is going**. Drag the **⋮** handle to reorder someone's list, and click the green WhatsApp circle by their name to send them their whole day's appointments in one message.

Worker day statuses and weekend availability

The **Away or elsewhere** panel records who's off (or in the yard): Holiday, Sick, Compassionate leave, Training, No pay or In the yard — one status per worker per day. A status takes the worker out of the assignment pool and turns their chip amber if they're accidentally still on a job; all of them except In the yard also reduce the calendar's capacity number. On Saturdays and Sundays an amber **Free to work this weekend** panel appears above the day's jobs: press each worker who's put themselves forward, and only they join the **Not on a job** pool.

12. Map

The Map (**More** → **Map**; it used to be called the Live Map, and had no link in the old navigation) plots every upcoming job with an address (next 90 days) on a UK map, each pin the nut in its job's category colour. A list of the same jobs, soonest first, sits beside the map on a wider screen, or behind a switcher on a phone. The coordinator chips, each in that coordinator's colour with a count, are filters — press a name to hide or show their jobs. Pressing a pin shows the job summary with an **Open Day View** button, and pressing a job in the list opens its day; the list also marks any job whose address couldn't be found. It's an admin-tier page by default; the address lookup runs one job per second, so a busy diary shows "Finding 12 addresses..." (or however many) for a short while when the page opens.

- **A job is missing from the map**

It has nothing in its **Full address** field, its address couldn't be found (too vague or misspelt — the list says "This address couldn't be found on the map."), it's cancelled, or its coordinator is filtered off with the chips.

Check the coordinator chips first, then tidy the address on the job — town and postcode help the lookup a lot.

13. Crew

The Crew page (**More** → **Crew**; it used to be called Workers) is your crew roster. People are grouped as **Out on site**, **Away**, **Free** and **No longer active**, with today's figures at the top; each row shows their role badges, phone (press it to ring), email and start date. Their daily rates and the role flags the rest of the app runs on are in the sheet that opens when you change them.

- 1 Press **Add someone** and fill in the **Full name** — the only required field — plus phone, email and **Start date**.
- 2 Tick the flags that apply — each one changes how the app treats the person (table below).
- 3 Press **Save**. Rates are set once someone is on the list: press the pencil (**Change**) on their row and enter **Basic rate (£ a day)** and **Charge rate (£ a day)** — these drive the Wages page and export. Anyone who can open the Crew page can see them here; it's the Wages page's rate columns and the money values in the wage download that are admin-only.

FLAG	WHAT IT DOES
Job coordinator	Named in the orange role badge; appears in coordinator dropdowns and receives job briefs.
Foreman	Named in the orange role badge; listed at the top of worker lists when planning.
Driver (by default)	Named in the orange role badge; treated as the driver by default when assigned to jobs.
Monthly paid (left out of Wages)	Blue badge. Salaried — excluded from the weekly Wages page and the Day View worker pool.
Casual (left out of the pool count)	Amber badge; excluded from the capacity pool count.

FLAG	WHAT IT DOES
Active on the workforce	Shown when you change someone. Untick when someone leaves — they move to No longer active , drop out of planning, holidays and closure pay, and can be re-activated any time.

DEACTIVATE, DON'T DELETE

Unticking **Active on the workforce** keeps the worker's history and is reversible. Deleting removes them from the active list — past records keep the name, but there's nothing to re-activate.

14. Holidays

Holidays (**More** → **Holidays**) records every worker's holiday, sickness and other absence days against their annual entitlement. On a wider screen everyone's list and a colour-coded month wall chart sit side by side; on a phone the switcher moves between **Everyone** and **Wall chart**. At the top, the nut shows the crew's days left, beside the year's holiday and sick days, with a switch between years. Each person has their own colour, days waiting for an answer are marked with a ?, and closed days are shaded.

Holidays — each person's allowance, days taken, days waiting and sick days.

Recording and approving days

- 1 Under **Everyone** (on a phone, switch to it), press the person's row to open it — or press their bar on the wall chart.
- 2 Pick a date — or tick **Several days** and set the **First day** and **Last day**; weekend days are skipped automatically, so a Monday-to-Friday week books exactly 5 days.

- 3 Choose the status — Holiday, Sick, Compassionate Leave, Training or No Pay — and, for a holiday that still needs sign-off, tick **Waiting for approval**.
- 4 Press **Add**. Every day waiting for an answer is listed at the top of the page behind a hazard stripe, each with its own **Approve**; in the person's row it carries an amber **Waiting for an answer** badge. Approving sends a confirmation email to the configured approver address.

Each row starts with a nut showing the days left (red once someone is over), and its badges keep score: "12 of 25 days" against the allowance (changed under **Holiday allowance** in the opened row), "N left" in amber when fewer than 3 days remain, "N over" in red, plus "N sick" and "N waiting". A daily "Holiday Approvals Needed" email lists everything still waiting — sent only when something actually is.

Closed days

The **Closed days** button (the round calendar icon in the page header) manages company-wide closures. The standard England-and-Wales bank holidays are created for you the first time; add your own shutdowns (**Name**, **First day**, **Last day**) under **Add a closure**, then **Add closure**. Closed weekdays are hatched on the calendar and shaded on the wall chart, are skipped by multi-day bookings (a single job on a closed date gets a warning rather than a block), and are *paid automatically* for every active worker with nothing else booked. The round download icon beside it saves the year's records as a CSV.

If something's not right

- **Approvals work but nobody receives the emails**

The **Holiday approver** / **Holiday reminder recipient** addresses aren't configured. The approvals themselves are still recorded.

An admin sets both in the setup wizard's Notifications step (**Settings → Run setup again**).

- **A pending holiday doesn't show on the Day View**

Pending (unapproved) holidays are deliberately hidden from the day's **Away or elsewhere** panel, and don't remove the worker from the pool until approved.

Approve it on **More → Holidays** and it appears everywhere.

- **The Add button is greyed out**

No start date has been picked yet, or a save is still in progress.

Pick a date first, then click **Add**.

15. Wages

Wages (**More** → **Wages**, admin-tier by default) builds each Monday-to-Sunday week automatically from job labour, absences, appointments and closed days — there's no double entry. Each day shows a badge per shift with its multiplier (contract numbers for job work, such as "2041 x1.0", status labels otherwise, such as "Sick x0.8"), and each row ends with the **Shifts** count and **Total x** — the sum of multipliers payroll actually pays. The week's people, shifts and total sit at the top, with arrows for the week before and the week after; on a phone the same table scrolls sideways.

The screenshot shows the CrewBook Wages interface. At the top, there's a navigation bar with options: Today, Calendar, Day View, Credit, Invoices, Sales, and More. Below this, the 'Wages' section is displayed for the week of 28 Sep to 4 Oct 2026. A summary bar shows 11 people, 51 shifts, and a total of 50.80. The main table lists workers and their shifts across the days of the week, with multipliers and totals.

WORKER	MON 28	TUE 29	WED 30	THU 1	FRI 2	SAT 3	SUN 4	SHIFTS	TOTAL x	BASIC RATE	CHARGE RATE
Aaron Pryce	—	2041 x1.0	2041 x1.0	2041 x1.0	2041 x1.0 2047 x1.0 =2.0	—	—	5	5.00	£150.00	£225.00
Ben Sturridge	—	—	2044 x1.0	2044 x1.0 2038 x1.0 =2.0	2038 x1.0	2038 x1.0	—	5	5.00	£185.00	£280.00
Callum Reid	2035 x1.0	2041 x1.0	2041 x1.0	2041 x1.0	2041 x1.0 2047 x1.0 =2.0	—	—	6	6.00	£190.00	£285.00
Dean Okafor	—	Appt	2050 x1.0	2038 x1.0	2038 x1.0	2038 x1.0	—	5	5.00	£150.00	£225.00
Kyle Banner	—	Appt	2050 x1.0	2038 x1.0	2038 x1.0	2038 x1.0	—	5	5.00	£130.00	£200.00
Liam Docherty	2035 x1.0	2041 x1.0	2041 x1.0	2041 x1.0	2041 x1.0 2047 x1.0 =2.0	—	—	6	6.00	£160.00	£240.00
Owen Fielding	2035 x1.0	2041 x1.0	2041 x1.0	2041 x1.0	2041 x1.0	—	—	5	5.00	£170.00	£250.00

The wage grid — click any badge to open that day in Day View and fix the source record.

- Normal shifts, holidays, compassionate leave, training, yard days, appointments, bank holidays and closures pay x1; **sick pays at your** **Sick pay multiplier** (x0.8 unless you've set another under **Settings** → **Expenses, pay and purchases**); **No Pay** shows on the grid but adds nothing.
- A worker on two jobs in one day shows both badges with the day total underneath — the split ($\frac{1}{2} + \frac{1}{2}$) was set automatically when they were assigned.

- Closed weekdays are paid for every active worker automatically — as **Bank Hol** when the date matches the official gov.uk England-and-Wales list, otherwise as **Holiday**. Workers who started after the closure date are skipped.
- **Download** saves the payroll spreadsheet (wages_*date*.xlsx) in the batch-timesheet format, with absences coded so payroll can post them. Rate figures fill in only for admins. The same file is emailed automatically each week to the configured **Weekly wages recipients** — the link in that email lasts 7 days.

FIX THE SOURCE, NOT THE SHEET

The grid rebuilds live from the underlying records every time you open it. If a day looks wrong, click its badge — you land on that date's Day View — fix the labour or status there, and come back.

If something's not right

- **A worker is missing from the wage grid**

They're flagged **Monthly paid (left out of Wages)**, or they had nothing recorded that week.

Check their flags on **More → Crew** and their entries on the Day View.

- **A bank holiday shows as "Holiday" — or isn't paid at all**

A date is only paid when it's in the Closed days list; it only shows as "Bank Hol" when it also matches the official gov.uk list.

Open **Holidays → Closed days** (the calendar icon) and add or correct the closure dates.

- **Rate columns are missing, or blank in the download**

Basic and charge rates are admin-only — everyone else gets the same sheet with the money columns blank.

Ask an admin to run the download if payroll needs the rates filled — and check the rates are set on the Crew page, or even an admin's sheet shows £0.

- **The link in an old wages email doesn't work**

Emailed download links expire after 7 days.

Open **More → Wages**, go to that week with the arrows, and click **Download**.

16. Absence & Cost report

Who has been off sick or on holiday, how many times, the dates, and what it cost. The report reads the same day statuses you set on the Calendar and Day View and prices them from each worker's basic daily rate, so nothing has to be entered twice.

Find it under **Sales → Reports → People**, alongside the sales reports. It is admin-level: Sales and Viewer tiers do not see it.

Choosing what you're looking at

FILTER	WHAT IT DOES
Reason	Sick (the default), Holiday , Compassionate leave , Training , Unpaid leave , Yard , or All reasons .
Basis	Costings (incl. NI) — the default — or Wages paid (excl. NI) . See below.
View	Per person (the default): one row per worker per reason, with times off, days, cost per time and the dates. Per occasion : one row per spell, with its start and end. Per day : one row per day off, showing the rate and the multiplier applied.
Period	The usual period picker — it defaults to Financial year to date .

"Times off" counts occasions, not days

Being off Monday to Wednesday is once, not three times. Consecutive days of the same reason roll into one occasion, and a weekend between two absent days does not break the run — off Friday and Monday is one spell of sickness, which is how anyone would describe it. Any other gap starts a new occasion. This is what makes the report usable for return-to-work conversations: three separate one-day absences read very differently from one three-day one.

The two bases, and why the figure changes

A day off costs the worker's basic daily rate times the multiplier your wages run pays for that reason — sick days at your **Sick pay multiplier**, unpaid leave at nothing, everything else in full. **Wages paid (excl. NI)** shows exactly that.

Costings (incl. NI), the default, additionally applies your employer NI loading, because that is how costings and the monthly management accounts value labour. It is the higher figure, and it is the one that agrees with your accounts. Whichever basis is used is printed on screen and on every export, so a figure never travels without its basis.

SET YOUR OWN FIGURES

Both come from **Settings → Expenses, pay and purchases**: **Sick pay multiplier** and **Employer NI loading**. Each accepts whichever form you think in — 0.8 or 80 both mean 80% of pay, and 15, 0.15 or 1.15 all mean +15% on labour. Left blank, CrewBook uses 80% (on Wages, in the Monday wages email and in this report) and +15%, which suit most UK employers, but they are your numbers to choose and the report is only as right as they are.

The rule that is easy to miss

A day marked absent that *a/so* has labour recorded against a job costs **£0** here — the wages run pays the job, not the absence. Someone marked sick who then turned up and was booked on site is paid for the work. Those days are still listed, because they remain a record of the absence, and the warnings total them separately. Without that rule the report would overstate what absence costs you.

Two other things worth knowing: a spell spanning a month end is split between the two months, exactly as wages are; and holiday days still awaiting approval are included.

If something's not right

- Days are listed but cost £0

Either the worker was booked on a job that day — so the wages run pays the job, not the absence — or the reason is Unpaid leave, or there is no basic rate on the worker's record.

The **Note** column says which it is. If it reads "No basic rate on worker record", set the rate under **More** → **Crew** and the figures fill in.

- The total doesn't match the management accounts

The report is probably on the wages basis, which excludes employer NI.

Set **Basis** to **Costings (incl. NI)** — the default — and check your employer NI loading in Settings matches the one your accounts use.

- "Nothing for this period"

The **Reason** filter defaults to **Sick**, so a period with no sickness looks empty even when there was holiday.

Switch **Reason** to **All reasons**, or widen the period.

17. Expenses

Anyone with the **Claim a receipt** switch sends in a claim from Today — what it was for, the amount, receipt photos and an optional contract number — and it waits for approval under their name. Admins look after the full register on the Expenses page (**More → Expenses**; it used to be called Petty Cash): approve or reject, record the payment, and export the monthly summary. The claims waiting for a decision, and the approved ones waiting to be paid, are on one page; every claim is on the other. A claim goes from waiting for approval to approved to paid, or is rejected, and claimants can follow their own under **Your claims** on Today.

Expenses — the claims to approve on one page, every claim on the other, VAT split out.

- 1 Submit** — from **Claim a receipt** on Today (anyone with the switch) or **New claim** on the Expenses page (admins). Add a receipt per item — camera photo or file — each with its own category, so one claim can carry a whole handful of receipts.
- 2 Amounts** — type the **Exc VAT** or **Inc VAT** figure and the rest fills in at 20% (adjusting the VAT box just updates the total); all three stay editable for zero-rated items.

- 3 **Approve** — the approver gets an email per new claim; each claim has **Approve** and **Reject** buttons, and **Back to waiting** moves an accidental approval back.
- 4 **Pay** — the **Pay** button opens the payment window, where you record who was paid, how (bank transfer, cash, cheque) and when. It lists every approved claim for that claimant, so you can settle the one you pressed with **Pay this claim** or clear the lot with **Pay all** (each button shows its amount) — the paid-to, method and date you enter apply to whichever you choose.

The **Pay all** button only appears when the claimant has more than one approved claim waiting.
- 5 **Month end** — switch the **Every claim** side to **Monthly summary**: it totals the month's approved and paid claims by category, with a styled **Export to Excel** download.

PUT CONTRACT NUMBERS ON JOB SPEND

A claim with a contract number flows into that contract's costs on the Costings page — approved and paid Small Tools claims especially. Allocate at claim time and the P&L takes care of itself.

- **"For administrators" instead of the Expenses page**

The full register is looked after by your company's administrators.

Send in and follow your own claims from Today instead — **Claim a receipt** and **Your claims** are there for exactly this.

- **No approval emails are going out**

No **Expense approver email** is configured.

An admin sets it in Settings — and optionally an **Expense payer email** for payment notifications (blank means the approver gets those too).

- **"No petty cash claims to export for this month"**

The month has no Approved or Paid claims — Pending and Rejected are excluded from the summary.

Approve the claims first, or pick a different month.

18. Mileage

Workers log business journeys on the Mileage page (**More → Mileage**, or **Log a journey** on Today) and turn them into expense claims. Everyone logs their own; admins see and log for anyone. What a journey is worth depends on the vehicle on the worker's record. A **personal car** is paid 55p a mile for the first 10,000 business miles in the tax year and 25p a mile above that. A **company car** is paid the quarterly HMRC Advisory Fuel Rate matching its fuel type and engine size, with no 10,000-mile band at all. See the 10,000-mile band below.

The screenshot displays the CrewBook Mileage interface. On the left, a summary card for 'Dan Hartwell (me)' shows 10,022 miles logged this year, worth £5,507.08. It includes a 'Log a journey' button and a 'Claim all (4)' button. Below this is 'The log' section with 8 entries, showing 4 journeys ready to be claimed. One journey is detailed: from Home, Brackley to Kingsbrook, Aylesbury, totaling 58.4 miles, with a claim value of £25.52. The right panel, titled 'The year', shows a progress bar for 10,022 miles against a 10,000-mile band, with a note about the 25p rate for miles over 10,000.

Journeys ready to claim — tick several and convert them into one expense claim.

- 1 Press **Log a journey**. Capture the route with **Locate** at each end (GPS, with road-distance lookup), type both addresses and use **Work out the road distance from the addresses**, or just type the miles.

2 A journey can have as many stops as it really had. The form starts with **From** and **To**; **Add another stop** adds a leg, each one labelled **Then**, and the x on a row (**Remove this stop**) takes one out again. The last row is always the final destination.

The whole route then travels with the journey, joined by arrows — "Yard → Site A → Site B → Yard" — drawn down the journey's card as a road, and joined by arrows on the expense claim it becomes, so a day spent hopping between sites reads as one journey instead of four.

3 Tick **There and back (the miles are doubled)** for a return trip and fill in the **Purpose**. The form auto-saves as a draft while you type, so closing it mid-trip loses nothing.

4 Check the **Claim rate**. An **Extra** p/mile can be added where agreed — an amber **Evidence needed for the higher rate** panel then asks for a photo (**Take a photo** or **Choose a file**) (the journey still saves without one, so take it).

Underneath, the form shows what the journey will come to: **Total: £84.70 (55p × 154 miles)**. If the journey would take the claimant past 10,000 business miles for the year, that estimate turns amber instead, gives the rate breakdown and adds a second line — **Joe Bloggs already has 9,900 business miles in 2026/27. Miles past 10,000 are paid at 25p (HMRC approved rate).**

5 Press **Log the journey**, then later **Claim** on its card — or tick several (or **Tick them all to claim together**) and use **Claim the ticked (3)**, or **Claim all (12)**, for one batch claim.

Either way a Pending expense claim is created in the Private Vehicle Use category, and the journeys move to "claimed". Deleting that claim later puts the journeys back, so no miles are ever lost.

The 10,000-mile band

A personal car is paid **55p a mile for the first 10,000 business miles** a claimant drives in a tax year, and **25p a mile** for every mile after that. Both figures are per person and per tax year, and the tax year runs 6 April to 5 April — a journey dated 6 April starts the new year's allowance whatever time of day it was logged. Company cars are on advisory fuel rates and have no band: their journeys are valued exactly as they are stored and are never split.

Only **claimed** and **logged** journeys count towards the 10,000. Drafts sit in their own panel behind a hazard stripe and are left out of every total; a draft's rate badge (such as **55p a**

mile) is simply its own rate — drafts never show a split. A split rate is worked out live for the journeys to claim; a claimed journey below shows whatever rate is stored on the journey itself, and the claim's own description and notes are the full record either way.

The page has two sides, **The log** and **The year** (side by side on a wider screen, behind a switcher on a phone), and the nut at the top shows the chosen person's miles this tax year. **The year** holds a **tax-year card** per claimant: one for the worker you have selected, for this tax year, plus one for every worker and tax year that still has a journey waiting to be claimed. Set the filter to **All workers** and the card for today drops off, leaving only the ones with miles outstanding. Each card reads:

- 1 The heading — the claimant's name, with a nut showing their miles, and under it **Business miles, tax year 2026/27 (6 Apr 2026 to 5 Apr 2027).**
- 2 The running total — **9,950.5 of 10,000 at 55p**, counting miles already claimed plus miles still to claim.
- 3 A bar 10,000 miles wide: Mileage's pink for miles claimed, a paler pink alongside for miles still to claim (both amber from 9,000). Under it, **Claimed 8,200 · to claim 1,750.5 · 49.5 left at 55p** — or, once the two together pass the line, **Claimed 9,000 · to claim 1,240.5 · 240.5 past 10,000** with the last part in amber.

THE CARD'S COLOUR IS THE EARLY WARNING.

It is pink below 9,000 miles and amber from 9,000, and it gets a hazard stripe once the line is crossed — by the miles claimed, or by the journeys waiting to be claimed. No message says someone is getting close: until the line is actually crossed all you have is that colour and the running figures under the bar — the miles counted so far and how many are left at 55p — so glance at the card before promising anyone a rate.

Past that, the card spells the position out. When the miles *already claimed* have passed the line it warns **Past 10,000 claimed miles: every further mile in 2026/27 is paid at 25p (HMRC approved rate).** When the claimed miles are still under but the journeys waiting to be claimed would cross it, the warning reads **The journeys to claim cross 10,000 miles: 240.5 mi at 25p instead of 55p, £72.15 less. Journeys past the line are marked in the log; values assume they are claimed in date order.**

A worker on a company car gets no band card — just a panel with their name reading **Company car: paid advisory fuel rates, with no 10,000-mile band.**

Journeys that cross the line

A journey with miles on both sides of 10,000 is tinted amber among the journeys to claim, and its card shows both halves in an amber badge instead of one rate — **100 mi @ 55p + 100 mi @ 25p** — with **Past 10,000 business miles in 2026/27.** written underneath. A journey wholly past the line shows the 25p half only; one wholly under it shows a single rate as it always did. Once a journey is claimed it moves down to the claimed journeys and shows the split stored on it — tinted amber if it was split.

Where a journey carries its own agreed **Extra** p/mile it shows as a **+5p extra** badge beside the rate, and that extra is added on top of *both* bands — so a mile past 10,000 on a journey with 5p extra is paid 30p, not 25p.

CLAIMING OUT OF ORDER CAN'T COST ANYONE MONEY.

Miles already claimed in the tax year use up the 10,000 first, and the values in the list assume the journeys still to claim are taken in date order. Claim a later journey before an earlier one and the earlier one simply takes whatever is left of the band — no more than 10,000 miles in a tax year can ever be paid at 55p, whichever order you claim in.

What a claim shows before you commit

Ticking several journeys and claiming them opens **Review the claim**, with a line underneath such as **3 journeys, to go in as one expense claim.** Each journey is listed, and any that meets the line is annotated in amber: **Crosses 10,000 business miles for 2026/27 partway through this journey**, or **Already past 10,000 business miles for 2026/27** when there are no full-rate miles left for it at all.

Below the list is the before-and-after panel, one box per tax year the claim touches. Its first line is **Joe Bloggs · tax year 2026/27: 8,200 → 9,950.5 business miles claimed** — what the claimant had claimed in that year, and what they will have claimed once you confirm. The second line is the part worth reading:

THE BOX
IS

AND THE SECOND LINE READS

Blue

49.5 miles left at the full rate after this claim. — the whole claim is inside the band.

THE BOX IS

AND THE SECOND LINE READS

Amber

This claim goes past 10,000: 240.5 mi at 25p (HMRC approved rate above 10,000), £72.15
less than at the full rate.

The total miles sit bottom left as **1750.5 miles in all**, with the £ total on the right, then **Cancel** and **Confirm the claim**. Confirming gives you **3 journeys claimed** — that toast always says "journeys", even for one. Only a personal car's journeys feed the before-and-after panel, so a company car's miles in the same batch add nothing to it.

Claiming a single journey from its row asks **Convert to expense claim?** and prices it fresh before it asks. Where it crosses the line the question spells out the split, and where claiming it on its own would be worth something different from the figure in the list, it says both: **154 miles, Yard → Site A → Yard: £68.50. 100 mi @ 55p + 54 mi @ 25p: past 10,000 business miles in 2026/27 (the list shows £38.50 assuming earlier journeys are claimed first; claimed on its own now it is £68.50)**. **Yes, create claim** commits it.

Whichever route you take, the split is written into the expense claim itself. The claim's notes carry **Past 10,000 business miles in tax year 2026/27: 240.5 mi paid at 25p (HMRC approved rate above 10,000)**, and a blanket extra rate entered on a batch adds **Includes blanket additional 5p/mile** above it. Once a journey has been claimed, what it was worth is fixed — nothing claimed later re-prices it. Stored rates are never rewritten either, so an old journey logged at 45p stays 45p.

THE CLAIM IS THE RECORD OF WHAT WAS PAID.

When you need the exact 55p/25p split for a claim — to answer a query, or to check a wage run — open the claim on Expenses and read its description and notes. That is where the breakdown is written out in full.

- **"Location access denied. Please allow in browser settings."**

The browser blocked GPS for the site.

Allow location access for CrewBook in the browser settings and press **Locate** again — or type the addresses and use the road-distance calculator instead.

- **No standard rate fills in for a company vehicle**

The worker's engine size is missing from their record, the vehicle is electric (no advisory rate), or the rates haven't been fetched.

Set the vehicle type and engine size on the worker record; an admin can pull the latest rates with **Fetch fuel rates** under **Settings → HMRC fuel rates** (a failed fetch never wipes the existing rates).

- **"Could not find one of the addresses"**

The address couldn't be located, or no driving route was found.

Use a fuller address with the postcode — or type the miles in yourself.

- **A claim came out lower than miles × 55p**

The claimant has passed 10,000 business miles for the tax year, so some or all of those miles are paid at 25p.

Check the tax-year card on **The year**: it shows how much of the band is left, and an amber card among the journeys to claim shows which journeys are split. This isn't an error — 55p only covers the first 10,000 business miles a person drives between 6 April and 5 April. The exact split is written into the claim's description and notes on Expenses.

- **The confirm dialog quotes a different amount from the row**

The list prices every journey as though the ones before it have already been claimed. Claim one on its own, out of order, and it takes whatever band is actually free at that moment instead.

The dialog says so in as many words — **the list shows £38.50 assuming earlier journeys are claimed first; claimed on its own now it is £68.50**. The dialog's figure is the one that will be claimed. Claim in date order, or use **Claim all**, and the two agree.

- **"The 55p/25p split is in the claim notes but could not be saved on the journeys yet (MileageLog needs publishing in the Builder)."**

The claim went through, but the journey record can't yet hold the 55p/25p split — the mileage fields it is written onto haven't been published in the Builder.

The claim is unaffected: its amount is right, and its description and notes carry the breakdown in full on Expenses. All that's missing is the copy of the split on the journeys themselves, so a claimed row shows one rate rather than the two halves. An admin publishing the mileage entity in the Builder clears it, and claims made after that stamp their journeys as well. A single journey says the same thing in the singular — **...could not be saved on the journey**

yet...

- **"The claim's value changed while you were reviewing it (another claim was made). Check the new figures and confirm again."**

Somebody else claimed journeys for the same person in the same tax year while your review was open, so the band moved underneath it. Rather than write a figure you never saw, CrewBook stops.

Nothing was written and no miles are lost. The list refreshes itself, the window stays open and re-prices itself — read the new before-and-after figures and confirm again. A single journey gives the same guard in different words: **This journey's value changed while you were**

confirming. Check it and claim again.

- **"These journeys belong to 2 people (...). A claim is for one person..."**

The ticked journeys aren't all the same worker's, and one claim can only be made for one claimant.

Confirm the claim stays greyed out until they are. Close the window, choose the worker at the top of the page, claim their journeys, then do the next person.

- **"Could not count this year's business miles, so the claim cannot be checked against the 10,000-mile band. Close and try again."**

The year's journeys couldn't be read back from the server, so there's no safe way to know where the claimant sits against 10,000.

Confirm the claim stays disabled and nothing is written. Close the window and try again. The tax-year card reports the same problem in red — **Could not count Joe Bloggs's 2026/27 miles.**

Values of journeys to claim may not show the 25p rate above 10,000. — so treat the values in the list as unreliable until it clears.

- **The Claim buttons are greyed out**

The worker records haven't finished loading. Until they have, CrewBook doesn't know who is on a personal car and who is on a company car — and it would rather wait than split a company car's miles at 10,000 by mistake.

Give the page a moment: **Claim**, **Claim the ticked** and **Claim all** come back on their own. If they stay greyed, refresh the page.

19. Invoice checking

The Invoices page has four tabs — **Jobs to invoice**, **Purchase invoices**, **Suppliers** and **Export**, under four figures: contracts to invoice, costs with no invoice in yet, queries with suppliers, and invoices billed over the order — that together make sure nothing goes unbilled and no supplier overcharge slips through.

CrewBook

Invoices

The jobs still to bill, and every supplier invoice checked against what was ordered.

12 contracts to invoice | 43 no invoice in yet | 1 query with a supplier | 2 billed over the order

Jobs to invoice · 19 | **Purchase invoices** | Suppliers | Export

Purchase invoices — ordered against invoiced, with any difference flagged.

Jobs to invoice

Every contract with days of work not yet billed to the client, one row each in a panel behind a hazard stripe (**N contracts not yet invoiced**), with a red **Not invoiced** or amber **Proforma** badge. Press **Mark as invoiced**, tick the days the invoice covers under **Which days to invoice**, set the **Invoice date** and **Save** — those days turn to **Invoiced** and drop off. Or send the paperwork to the office instead: from the job's Summary tab in Day View, **Raise a draft document** sends a draft invoice, credit note, proforma or application to the front desk, who add the detail, check the VAT and issue it with the next document number (see the Sales area).

Purchase invoices

Line-by-line reconciliation of supplier invoices against what was ordered — materials, hired plant, dayworks, subs and haulage. The **Difference** column tells the story: a green **Matched**, an amber **No invoice** (none received yet), a red overcharge such as **+£60.00**, or a purple **Queried**; any line that isn't matched also has a coloured strip down its left edge. Filter with **Differences only**, **No invoice received** and **Queries pending**; pressing a row opens that day in Day View, and the back arrow there returns you to Invoice checking rather than the Calendar.

The page remembers where you were. The tab you're on, whatever is typed in **Search by supplier, reference or contract...**, all three filter toggles and any open query are kept in the page address. Refresh, bookmark it, send it to a colleague or come back with the browser's back button, and the same view comes back — including the query dialog, reopened on freshly loaded figures rather than a stale copy. Typing in the search box and flicking filters doesn't pile up browser history either, so back still takes you where you actually came from.

- 1 Work the **Differences only** list: for each red figure, either tick **Invoice OK** to accept it, or press **Raise a query**.
- 2 A query records the date, who raised it, the reason (price, quantity, quality, delivery, wrong job...) and the details — and, with **Email this query to the supplier**, goes straight to the supplier's **Queries to** contact, copy to you.
- 3 If the query isn't resolved within 7 days, whoever raised it is emailed a reminder — repeating weekly until it's marked **Resolved**. When the credit note lands, press **Credit received**.

Both are switches that fill in, with a tick, once set.

A query shows where it stands. Untouched, the control reads **Raise a query**. Once raised it reads **Queried 14 Sep: Price difference** (on a phone, **Edit the query**) beside a purple **Queried** badge, and pressing it reopens the query (the sheet is titled **Change this query**, with **Save the query** and **Remove the query**). Once it's settled, the **Resolved** switch fills in. The same control sits on a job in Day View, where it reads **Raise a query**, then **Queried** and the date, with ", settled" added once resolved — and **Other costs** rows carry it too, so a disputed one-off cost is chased exactly like a disputed load of material. An open query and a resolved one used to look identical, which is how a settled query got chased a second time.

You can open the cost line behind a query without losing your place. Near the top of the query dialog, under the item it refers to, is **Open this on its job in Day View**. It takes you to that cost's job in Day View, on the right date, with the job window already on the tab the cost sits on — a material line opens **Materials**, hired plant opens **Hired plant**, a subcontractor opens **Subcontractors**, plant haulage opens **Own plant**, and grab lorries, material testing, traffic management and drawings open **Other costs**. Correct what needs correcting, then press **Back to query** at the top left of the job window's header: you land back on Invoice checking with the tab, the search, the filters and that same query dialog exactly as you left them. The button is greyed out for the moment a query is saving, and it isn't shown at all on a cost line CrewBook can't tie to a date.

Suppliers

The supplier list behind all of this: account code, legal and display names, the **Queries to** email, whether it's **In Sage**, and the CIS toggle (CIS suppliers export with reverse-charge VAT code T21). Press any cell to change it. Suppliers created in a hurry carry the code PENDING, tinted amber with a **Waiting for a code** badge, until the real code from your accounting system is entered.

Export

Downloads invoiced purchase costs as a CSV in your accounts import layout, then stamps each record so it's never sent twice. Set the date range, check the preview ("Ready" rows go in the file), and click **Download CSV**. Only costs with an invoice reference *and* a contract number matching a live job export — anything blocked is listed in red with "needs a contract number", stays unstamped, and gets picked up automatically once fixed.

If something's not right

- **"This supplier has no address for queries."**

The supplier record has no **Queries to** email, so the query can't be emailed (it's still saved on the item).

Add the address on the Suppliers tab, then reopen the query and send it.

- **"N invoiced costs were left out of the CSV. They are listed below: each needs a contract number."**

Those costs have no contract number, or theirs doesn't match any live job.

Open the red list, add a valid contract number to each item's job, and run the same date range again — only the previously blocked rows will be new.

- **"CSV downloaded, but N records were NOT marked as exported..."**

The file downloaded but some rows failed to get their exported stamp — they'll show as "Ready" again next run.

Those rows ARE in the CSV you just downloaded. Don't export them again blindly, or your accounting system gets them twice — exclude them from the next file, or de-duplicate on import.

- **"The draft is saved. No notify email is set in Sales settings..."**

The draft reached the front desk's queue, but nobody was emailed about it.

Tell the front desk directly this time, and set the draft notifications email in the Sales settings so future drafts announce themselves.

- **The job window opened on the wrong tab**

Not every cost type has a tab of its own, and a few open **Materials** when the line actually lives elsewhere. Daywork, haulage and opening charges belong to the **Haulage and charges** panel on the job's **Summary** tab, and a line typed simply as "Other" sits on **Other costs**.

The line is on the job — just not on the tab you landed on. Press **Summary** for daywork, haulage and opening charges, or **Other costs** for an "Other" line. A split load charge is the exception among these: it really is on **Materials**, shown inside the material row it belongs to. An unrecognised tab never leaves you with a blank pane — the window falls back to **Summary**.

- **There's no "Open this on its job in Day View" button on a query**

CrewBook couldn't work out which day to open. The cost line matches no job — neither by its own job nor by contract number and date — and carries no date of its own.

Put a contract number and a date on the job the cost belongs to, then reopen the query. The same gap makes the row unclickable in the list: a row with no date has no pointer cursor and doesn't respond.

- **"Back to query" isn't on the job window**

That button only appears when you arrived from an open query. Clicking a purchase-invoice row opens the day with no query to go back to.

Use the back arrow instead — from a purchase-invoice row it still returns you to Invoice checking, not the Calendar. To come back to the query itself, open the row's query first and go through **Open this on its job in Day View**.

20. Credit checks

The Credit page's **To check** tab lists every upcoming, non-provisional job whose credit status is still **No credit** or **Needs checking** — in two panels behind hazard stripes, No credit first, each soonest first — with each job showing the contract's estimated value against the client's live **Available credit** (their limit minus outstanding invoices; red means already over). The **Credit limits** tab holds the limits themselves. A similar tally appears under Needs you on Today.

- 1 Wait for the Available credit figure to load (it shows a spinner rather than a possibly-wrong number).
- 2 Pick the outcome under **Set the credit status**: **OK**, **No credit**, **Payment upfront** (with the **Upfront %**), or **Special authority** (with who it was **Authorised by**).
- 3 Press **Save the status**, which appears once you've changed it — the status copies to every other day of the same contract automatically.
- 4 Need more headroom instead? **Request credit** raises a credit limit request to whoever decides — its progress then shows on the card.

21. Costings — the monthly P&L

Costings is the per-contract profit and loss: every job's subcontractors, materials, hired plant, own plant, small tools and labour against its sales — live from the sales invoicing, updating automatically. Pick **Monthly**, **FY YTD** (from 1 April) or **CY YTD** (from 1 January); click any row to drill into the contract's full cost breakdown, down to the individual items and the days they sit on.

Where to find it, and who can. Costings sits in the Sales area, as the **Costings** tile under **Pricing and performance** on the Sales Overview. It isn't in More, and the old address still works — an old bookmark lands in the right place. Access is its own **Costings** page chip rather than a rank: Admin and Super Admin have it by default, and an admin can switch it on for an Office or Site Staff login from **Settings → Users and access** without handing over anything else. The Accrual Log is behind the same chip, being a drill-down of the same figures.

It **opens on last month**, not this one: costings are worked in arrears, and the current month is still filling up with jobs. Change the month at the top when you want a different one.

A contract's breakdown for the month — the amber line is cost accrued while its supplier invoice is still to come.

- **Overheads** — in the **Monthly overheads** panel, enter **Plant depreciation (£ a month)** (divided across the period's paver days for the own plant rate) and **Small tools and plant repairs (£ a month)** (spread across every job day). Both save as you type, per period. A report covering several months adds up each month's own figures rather than repeating one month's across the window, so a quarter or a financial year recovers what you actually entered. Months you never filled in recover nothing, and the Contract Profitability report names them.
- **Reading the Sales column** — green is invoiced; purple includes proforma/application revenue or an adjustment (marked *); a timing badge means the invoice was issued in a different month — **← Prev mth**, **Next mth →**, **← / →** when it is split across both, or **Other mth** for anything further away, all in blue; a red **Remedial** badge means no sales are expected. The badge now comes from the sales documents themselves rather than a hand-set invoice date on the job, so contracts that used to show a blank Sales column and no badge at all — and so read as never invoiced — are correctly marked as billed in the month next door.
- **Moving revenue between months** — the **Income deferrals and accruals** panel records a deferral (push revenue later) or an accrual (pull it earlier) per contract, and both months' figures adjust with the * marker.

- **Exports** — **CSV** or a styled **Excel** workbook including the overhead inputs and the adjusted revenue summary; **Report** opens the matching Contract Profitability report for the same period.

Month-end accruals and the Accrual Log

Amber figures are **accrued costs** — recorded on jobs but with no supplier invoice yet. At month end, in the **Accrual cut-off** panel, enter the date the management accounts were prepared and press **Freeze the accruals at this date**: a snapshot of everything accrued is frozen, with the total, line count and who took it. The **Accrual Log** page then compares that frozen list against reality, month by month: green **Invoiced** lines arrived in time, blue **Came in late** lines landed after the cut-off (normal — they hit a later month in your accounts), and amber **Still open · Nd** lines have had no invoice at all — your chasing list, exportable as a CSV for the accountant.

If something's not right

- **Sales and profit columns show "Fetching the sales..." or dashes**

The live sales figures haven't finished loading from the invoicing module.

Wait for the green "Sales come live from the sales side" bar before reading profit; if it says "The sales could not be fetched", reload the page.

- **The Own plant column is all dashes**

Plant depreciation (£ a month) is empty, there were no paver days in the period, or no paver plant types are configured.

Enter the monthly depreciation figure, and check the paver plant types in the company settings.

- **"Freeze the accruals at this date" is greyed out**

No prepared-on date has been entered, or there are zero accrual lines.

Fill in **Management accounts prepared on** first; if nothing is accrued, there's nothing to freeze.

- **An Accrual Log line shows "Record deleted"**

The cost record that was accrued has since been deleted from its day.

Check with whoever manages that job's records — the accrued amount may need reversing in the accounts. The frozen snapshot deliberately keeps the evidence.

22. Reports

The Reports page is the catalogue of everything the app will total, filter, print and export for you. Open it from the **Reports** tile on the Sales Overview, or from **Insights** via **Reports and exports** at the top right. The cards are grouped: **People** holds the Absence & Cost report, **Money** holds Contract Profitability and Invoices Not Received, and **Sales & Credit** holds Aged Debtors, the Retention Register and Chasing Effectiveness — the three documented in the CrewQCI guide, which behave identically here.

Every report works the same way: filters across the top, key figures, a chart, a sortable table, and **PDF** / **Excel** / **CSV** downloads that match exactly what is on screen. Each carries a collapsible **How these figures are worked out** panel, and those same plain-English assumptions print on the PDF and in the Excel *Basis* sheet — so a figure can go to your accountant with its rules attached. Filters live in the web address, so a report can be bookmarked or its link shared. Reports are admin-level.

Reports covering a span of time share one **Period** picker: **Month**, **Last month**, **Last 3 months**, **Last 6 months**, **Last 12 months**, **Financial year to date**, **Full financial year**, **Last financial year**, **Calendar year to date**, **Calendar year** and **Custom range**. Financial years run April to March. The **Year** box reaches ten years back and one year forward.

Contract Profitability

The Costings page for a whole period rather than one month: every contract's costs against its sales, with the profit and margin worked out. The columns are **Job No**, **Client**, **Site**, **Co-ord**, then the cost breakdown — **Subs**, **Materials**, **Hired Plant**, **Own Plant**, **Small Tools**, **Labour**, **Accrued**, **Total Cost** — then **Sales**, **Of which applied for**, **Profit** and **Margin**.

OVERHEADS ARE ADDED UP MONTH BY MONTH

Own plant and small tools are recovered from the **Plant depreciation (£ a month)** and **Small tools and plant repairs (£ a month)** figures you enter on the Costings page. Across a period of several months the report **adds up each month's own figure**. It does not take one month's number and multiply it by the number of months — so a quarter in which you raised depreciation halfway through recovers what you actually entered, not three times the first month. Months with nothing entered recover nothing, and the report says which ones: "No plant depreciation is set on the Costings page for ...".

Contracts with sales but no job costs are still listed — they are money in that the period can't explain — but their **Profit** and **Margin** are left blank and they are kept out of the totals, because a profit figure against no costs would be a fiction. A warning counts them: "N contracts have sales but no job cost records in this period — shown with blank profit and left out of the totals."

Invoices Not Received

Everything you have ordered and used that no supplier has billed you for yet — the chasing list for the purchase side, and the answer to "what is still to come in?". One row per outstanding cost: **Job date**, **Days waiting**, **Supplier**, **Type**, **Description**, **Contract**, **Client**, **Site**, **Expected cost**, **Chased** and **Queries to**.

FILTER	WHAT IT DOES
Waiting	Any age (the default), 30+ days , 60+ days or 90+ days .
Type	All types , Materials , Hired plant , Subcontractors or Dayworks & haulage .
Chased	All , Query raised or Not yet chased .
Supplier	All suppliers , or one of them — the list is built from the suppliers actually appearing in the report, so it only ever offers names with something outstanding.
Client	All clients , or one of them.

READ THE BASIS BEFORE YOU QUOTE IT

Three things make this report different from the ones next to it. The amounts are **ex VAT** and they are the **ordered** or quoted cost, not an invoiced one — no invoice has arrived, so every figure is what you expect to be charged rather than what you have been. It is a **position as at today**, not a period report: run it tomorrow and the figures differ. And although it sits close to the purchase accrual, it is **not** the frozen snapshot the Costings page takes at month end. For a month-end reconciliation use the snapshot, not this.

How far back it reaches is set once, by **Chase purchases from** under **Settings → Expenses, pay and purchases**: job dates before it are ignored. Set it to the day you started entering purchases in the app, so work migrated from your old system isn't chased for invoices that were settled years ago. Left blank, everything is counted however old, and the report says so.

If something's not right

- "Every purchase line in the app is counted, however old."

Chase purchases from is blank, so Invoices Not Received is reaching back to your very first record — including anything migrated from a previous system, which nobody is waiting on an invoice for.

Set it under **Settings → Expenses, pay and purchases** to the date you began entering purchases here, and the permanent backlog disappears.

- A contract shows sales but its Profit is blank

It has sales in the period but no job cost records, so there is nothing to subtract. It is deliberately left out of the totals rather than shown at 100% margin.

Usually the work sits in another month, or the contract number on the jobs doesn't match the one on the invoice. Check the jobs on that number and the period you've chosen.

- **"No plant depreciation is set on the Costings page for ..."**

Contract Profitability adds up each month's own overhead figures, and those months have none entered — so no own plant or small tools cost is recovered for them.

Open Costings at each month the warning names and fill in **Plant depreciation (£ a month)** and **Small tools and plant repairs (£ a month)**, then run the report again.

- **Plant-haulage rows export with no Supplier Ref**

Plant haulage supplier in Settings is blank, or the name in it doesn't match a record on the Suppliers tab. A plant movement records what moved, not who moved it, so the export has nothing to look up.

Set the name exactly as the supplier is stored, and check that supplier has an account code. Until then the column is left empty for the bookkeeper to complete — which is safer than guessing an account.

23. The Sales area

Sales is an area of its own — QCI, reached from **Sales** in the navigation — in teal and gold: leads, quotes, contracts, invoicing, proformas and applications, retentions, credit control, prospecting, insights and reports. It's the same sales pipeline as the standalone CrewQCI product, woven into your schedule — so this chapter covers how the two sides join, and the CrewQCI user guide covers every sales page in full detail. The **?** button at the top right of the Sales area takes you straight there, at the chapter for the page you're on.

The Sales area — its own pages along the navigation, its own colours, one login.

Getting in and out

Press **Sales** in the navigation — on the pill along the top, or the bar along the bottom of a phone; it's a tile in More as well. You land on the Sales Overview, and the navigation changes to the sales pages: **CrewBook** first, to take you back, then Overview, Leads, Quotes, Contracts, Invoicing, Proformas/Applications, Retentions, Credit Control, Prospecting and Insights. Unless the screen is very wide the pill shows the name of the page you're on and icons for the rest, and on a phone the bar scrolls sideways. The

Overview carries four figures in its header — **Outstanding today**, **Overdue** (red as soon as there is any), **New leads** and **Clients on file**, each opening its page — and groups its tiles in the order the work happens: **Sales pipeline** (Leads, Quotes, Contracts, Prospecting), **Money in** (Invoicing, Proformas/Applications, Retentions, Credit Control), **Pricing and performance** (Costings, Insights, Reports) and **Records and setup** (Clients, Settings). Several tiles carry a live pill: Leads "N new", Invoicing the outstanding total, Credit Control the overdue count (green at nought, red above it), Clients how many are on file. Below them sits the **Overdue invoices** table — invoice, client, due date, days overdue, credit limit and owing — showing the worst eight, with **Show all N overdue** to open the lot and **Show the worst 8 only** to fold it back. Three areas sit off that navigation, and all three are tiles on the Overview: **Settings** is also the  cog at the top right, next to the  button; **Reports** also opens from **Insights** via **Reports and exports** at the top right; and the client register is the **Clients** tile. **Sales** only appears for users with the **QCI Sales** page permission (Admin and Super Admin tiers have it by default). Search is the round magnifying glass at the top right; its box reads "Search QCI and planned works... use # to be exact" — results include a "Job days (the Book)" area, so one search spans sales *and* the schedule.

Searching sales and the schedule together

Press the magnifying glass, type, and press Enter for the results page. Results are grouped into one card per area — clients, credit control, leads, quotes, contracts, invoices and credit notes, proformas and applications, retentions, prospects, suppliers and job days — with a count strip across the top showing which areas the term appears in. Click a count to jump to that card, or any result to open the record on its own page. Areas with hits sort to the front, and a long list shows the first six with **Show {n} more** underneath.

The search runs on the server — each area asks the database for its matches rather than downloading a register into your browser — so it reaches your whole history rather than the most recent few thousand rows.

- **Each area returns at most 200 matches.** An area that fills up shows its count as **200+** instead of a number: narrow the term, don't assume 200 is all there is.
- **An area that fails says so.** Its card reads "Couldn't search job days (the book). There may be matches here." with a **Try again** button, and a line above the results names every area that failed. A broken area is never reported as an empty one.
- **Punctuation and spacing are ignored**, so "A & C Hobbs", "A and C Hobbs" and "A+C Hobbs" all find the account stored as "A&C Hobbs Ltd". Company endings like Ltd and plc are ignored too — the same client is rarely typed the same way twice.

- Client accounts match on their **alias names** as well, so a merged account is found under every name it has ever been invoiced under.
- Prefix with # (e.g. **#6532**) for an exact reference search — it matches the whole number only, so #6532 will not return 16532.
- Job days show upcoming first, then past; cancelled days are left out. Each one opens straight into Day View.

TIP

Search a contract number with # to pull together the whole story at once — the contract, the quote it came from, its invoices and retentions, and every day it was on the schedule.

Drafts: from the job to the front desk

The flagship join. A coordinator on a job can send the billing to the office without ever entering QCI:

- 1 On the job's Summary tab, click **Raise draft document** (under the invoice status bar) — no QCI access needed.
- 2 Work down the numbered cards: **Document type** (Invoice, Credit Note, Proforma or Application for Payment), **Job days covered**, **What is being charged**, **Money and terms**, **Client address** and **Notes for the front desk**. Under Job days covered, un-invoiced days start ticked, remedial days unticked, and already-billed days show an **Invoiced** badge.
- 3 Add the priced lines under **What is being charged** — these print on the document, so the front desk is not guessing what the job was. In any details box, **Shift+Enter** starts a new line within the same priced item; plain Enter does nothing, so a stray keystroke can't add a blank line.
- 4 Set the net amount, VAT and payment terms under **Money and terms**, check the printed **Client address**, then **Send to the front desk**.
- 5 The ticked days flip to **Draft Invoice Raised** (blue), the job gains a blue **Draft with the front desk** badge, and the office is emailed — to the **Draft notifications email** set in the Sales settings.

6

At the front desk, the draft waits in the **Drafts to finish** panel, behind a hazard stripe at the top of the register. Opening it shows the coordinator's note; the office adds line items, checks the VAT, and presses the orange **Issue** — which is the moment the next document number is allocated. A prompt then offers to mark the job days **Invoice Issued** in the schedule, closing the loop.

WHY DRAFTS ARE SAFE

A draft has no number and is excluded from every figure, report and export until issued — its preview even prints with a DRAFT watermark. Deleting a draft frees its job days back to Not Invoiced. And numbers are never wasted: they only exist once the office presses Issue.

Contract numbers: the thread between the two sides

- On a job, the small **Sales** button next to the red #contract chip ("Open this contract in Sales") jumps straight to that contract (shown when the job is genuinely linked and you have Sales access).
- In Sales, a contract's **Job days in the Book** panel lists every scheduled day on that number — press one to open it in Day View.
- On an invoice, the **Job days invoiced** section ticks the real scheduled days the invoice bills — and warns "N ticked days are already invoiced on #.... Untick unless you mean to bill again." if you're about to double-bill.
- A day's billing status can always be set by hand from the job's Summary tab — Not Invoiced (red), Draft Raised (blue), Invoice Issued (green), Proforma/Application (amber) — for one day, specific days, or the whole contract.

One client register for both sides

The names booked on jobs and the accounts invoices are raised against are the same register. A green building icon next to a client name on a job means it's linked to an account; an amber warning triangle means no account matches — tap it and the Clients page opens with the setup form pre-filled. The Clients page also collects **new-client requests** raised from the field for approval, and its red panel lists any booked names with no account. Renaming an account carries the new name across jobs, contracts, quotes and invoices automatically.

What was emailed to the client, and resending it

Every document email the app sends is kept. Open one document's history with **Sent emails** in its PDF preview, or a whole register's with **Sent emails** in the header of Invoicing or Proformas/Applications — that view has its own search across document number, client, address and subject.

Pick a send to read the email exactly as the client received it, change the address under **Send it again to (change the address if you need to)** if it needs to go somewhere new, and press **Send again**. Sending again reuses the PDF that actually went out and gives it a fresh 30-day download link, so the client gets the same paperwork with a working link rather than a rebuilt document.

EMAILS SENT BEFORE THIS EXISTED

Only sends made since the sent-email log was added are listed. Older ones show only as the "Last emailed to ... on ..." stamp on the record.

If you've used standalone CrewQCI

Everything central works the same — registers, document numbering, credit control, retentions, prospecting, reports, Sage exports, settings. The differences: you enter with **Sales** in the navigation rather than a separate login; access is CrewBook's **QCI Sales** permission; search also covers the schedule; invoices tick real job days instead of a typed date list; the draft-from-job flow exists; and there is no workbook Import page.

If something's not right

- **There's no Sales in my navigation**

Your account doesn't have the **QCI Sales** page permission.

Ask an admin to turn on the QCI Sales chip in **Settings → Users and access** — Admin and Super Admin tiers have it automatically.

- **"The draft is saved. No notify email is set in Sales settings..."**

The **Draft notifications email** in QCI Settings is blank, so no email went to the office. The draft itself is safely in the drafts panel.

Tell the front desk directly this time, and fill in the address under **Sales → Settings → Bank & document text**.

- **The Issue button is greyed out on a draft**

The net amount is zero — a document can't be issued for nothing.

Add the line items or a net amount first; for proformas, a "Needed before issuing: ..." toast lists exactly what's missing.

- **"N ticked days are already invoiced on #..."**

Another issued invoice already claims those job days — you may be about to double-bill.

Untick the days unless you genuinely mean to bill them again. Drafts never claim days, so they never trigger this.

- **A client's balance looks split across two accounts**

The client has been invoiced under two names and one became its own account instead of an alias.

On the Clients page, use **Link** to roll the extra name into the real account — balances and history combine.

24. Settings

Settings (a tile on More; it used to be the **Admin** button) is your company's control room: who can sign in, what CrewBook is connected to, and the lists everyone picks from.

Changes save as you leave each field; there's no Save button. Shortcuts sit at the top, then the panels under three headings:

- **Shortcuts** — **Backups** (back up now, or restore), the in-app **User guide**, **Run setup again** (walk through the setup wizard), **Data explorer** (Super Admins only) and **Your account**. Costings is not among them — it is a tile on the Sales Overview.
- **Integrations** — WhatsApp job briefs, email, SharePoint and where backups are written: covered in the next chapter.
- **People and notices** — **Users and access** (invites, tiers, page chips and linked workers: covered under your team), then who gets emailed about credit limit requests and new client requests. An empty list means "saved but not emailed", so fill these in early.
- **The company's own way of working:**
 - **Lists and options** — the lists people pick from across the app: sectors, lead sources, payment terms, quote statuses, credit authorisers, job titles, plant and equipment types, the tonnage suppliers and paver plant types shown on Today, and the Day View heavy plant list. Type and press Enter to add; x to remove.
 - **Expenses, pay and purchases** — the **Expense approver email** and **Expense payer email**, the **Sick pay multiplier** and **Employer NI loading** behind wages, the absence report and costings, and two fields that drive the purchase side:
 - **Plant haulage supplier** — "Who carries your plant between sites. Shown as the supplier on plant haulage lines in Purchase Invoices. Leave blank for no supplier on those lines." Type the name exactly as it appears on the Suppliers tab: the Sage export looks it up there and writes that supplier's account code into the **Supplier Ref** column on every plant-haulage row. Left blank, or set to a name with no supplier record behind it, those rows export with Supplier Ref empty for the bookkeeper to complete — which is what they always did before this field existed.
 - **Chase purchases from** — "The date you started entering purchases here. Invoices Not Received ignores anything earlier, so older history is not chased. Leave blank for everything." It is the reach-back for the Invoices Not Received report and nothing else.

- **Suppliers to Sage** — exports supplier records in the Sage template, stamping what's been sent.
- **HMRC fuel rates** and **Backup and restore** — below.

TIP

Two panels on Today hide themselves until they're set up here, under **Lists and options**: the tonnage panel needs **Today: tonnage suppliers**, and **Paver days** needs **Today: paver plant types**. A "missing" panel usually just means an empty list.

25. Integrations: WhatsApp, email, SharePoint

WhatsApp job briefs (Twilio) — the one-off setup

Briefs go out from *your* company's own WhatsApp number via your own Twilio account, so replies come to you. The setup takes about 20 minutes plus WhatsApp's approval time:

- 1 Create a free account at [twilio.com](https://www.twilio.com) and add WhatsApp to a number (Twilio Console → Messaging → Senders → WhatsApp senders).

WhatsApp's approval of your business can take a day or two.

- 2 Copy your **Account SID** (starts AC) and **Auth Token** from the Twilio Console home page into the WhatsApp card on **Settings → Integrations**, plus your **WhatsApp number** (e.g. +447123456789).

- 3 Open **How to set this up** on the card and create the two message templates in Twilio — one for job briefs, one for appointments. The exact bodies are provided word-for-word with Copy buttons, so approval is usually straightforward (minutes to a few hours).

- 4 Paste each approved template's Content SID (starts HX) into **Job brief template SID** and **Appointment template SID**.

- 5 For delivery ticks on the Message Delivery page, set the status callback URL from step 5 of the walkthrough on your Twilio WhatsApp sender.

- 6 Turn on **Send by WhatsApp**, then use **Send test** with your own number — "Test message sent. Check your WhatsApp."

Email

No setup needed — notifications, wage summaries and sales documents are emailed automatically under your company name. If you'd rather sends came from your own mailbox, set the **Preferred connected mailbox (optional)** (Auto, Outlook or Gmail) and the **Sender name on emails**.

SharePoint

Optional — "File the sales documents CrewBook produces onto your SharePoint site, and keep your nightly backup there." Enter your **SharePoint site name** (part of the site's name

is enough; this is the field that makes the connection work) and turn on **Use SharePoint**.

There's nothing to sign in to here: the Microsoft connection itself is authorised by whoever runs CrewBook. Filing documents and backups is all it does now. Looking a contract up when you book a job no longer goes near SharePoint — that reads your own contract register, so it works whether you use SharePoint or not.

If something's not right

- **"No Twilio credentials are configured..." on a test send**

One or more of the three credential fields is empty.

Fill in the Account SID, Auth Token and WhatsApp number on the Integrations card, then retry.

- **"WhatsApp is connected but the message template SID is missing."**

The template's Content SID hasn't been pasted in yet.

Copy the SID (starts HX) from Twilio's Content Template Builder into the template SID field. If the template is brand new, WhatsApp may still be reviewing it — a few hours' wait is normal.

- **A test send fails with a raw Twilio error**

Twilio rejected the send — unapproved template, unverified number, or wrong credentials.

The toast shows Twilio's own error text, code and link — follow it in the Twilio Console.

- **Delivery status never updates on Message Delivery**

The status callback URL isn't set on your Twilio WhatsApp sender, so Twilio has nowhere to report to.

Copy the callback URL from step 5 of "How to set this up" into the sender's settings in Twilio.

26. Backups and restore

Backups write a complete snapshot of every data table to *your own* Google Drive — under "CrewBook Backups / your company / date /", one file per table plus a manifest listing exactly what was taken. CrewBook can only see the backup files it creates, not the rest of your Drive, and your Twilio auth token is deliberately never written to a backup file (re-enter that one field after a restore).

- 1 One-off: under **Settings → Integrations → Backups**, set **Where backups are written** to **My Google Drive** and click **Connect Google Drive**.
- 2 On the Backups page (the **Backups** shortcut at the top of Settings), press **Back up now** and wait for "Backup complete: N records across N tables saved to your Google Drive".
- 3 To restore, press a backup to open it and run the safe two-step flow: **Check what would be restored** first (a dry run reporting "N missing" or "All present" per table, changing nothing), then **Restore N records**.

Restores only ever add back missing records — existing records are never overwritten.

MAKE IT A ROUTINE

A backup to your own Drive needs your own Google sign-in, so it can't run itself — the page shows when the last one ran, and a stale date is your cue. If any table can't be read, the backup deliberately writes nothing rather than leave a folder that looks complete but isn't.

• "Backups aren't set up yet"

No backup destination has been chosen, or the Google account isn't connected.

Settings → Integrations → Backups: pick **My Google Drive** and click **Connect Google Drive**.

If the sign-in popup won't open, allow pop-ups for CrewBook.

- **"Backup stopped before writing anything: some of your data could not be read."**

One or more tables failed to download, so no partial backup was written — deliberately.

Try again; if it persists, email Peter. Nothing misleading was saved to Drive.

- **"No backups yet" even after backing up**

The on-page snapshot list shows operator-managed snapshots; your own manual backup went to your Google Drive.

Check Drive under "CrewBook Backups / your company /" — the files are there. For a restore from the on-page list, ask the operator.

27. Message delivery

The Message Delivery page (**More → Message Delivery**) is the audit trail for every WhatsApp brief: grouped by job, with per-job counts of delivered, read and failed, and the totals at the top of the page. Each message shows the worker (matched from their phone number), the status — **Queued** (grey), **Sent** (amber), **Delivered** (green tick), **Read** (blue eye), **Failed** / **Not delivered** (red) — and, for failures, Twilio's exact error text in red. A job with a failed message is marked with a hazard stripe. Search by worker, client, site, phone or message SID, or set the status filter to **Failed** and then **Not delivered** to list the failures; anyone not on delivered or read is worth a phone call.

- **A message shows "Unknown" instead of the worker's name**

The number the brief went to doesn't match any phone number on the Crew page.

Fix the number on the worker's record — future messages will match.

- **Messages stay on "Sent" and never show Delivered or Read**

Twilio isn't reporting status back — the status callback URL isn't configured on your WhatsApp sender.

See integrations, step 5 of the WhatsApp walkthrough.

28. Data explorer

For Super Admins only: a read-only browser over every data table in the app, grouped by area — the raw records behind every page. Pick a table from the chips, search the loaded rows, and press a row (or Enter or Space) to see every stored field. It answers "what exactly is stored?" — all changes still happen on the normal pages, and company settings (which hold your Twilio credentials) are deliberately not browsable. The search only covers rows already loaded, so press **Fetch more** first when hunting something old.

29. Troubleshooting index

Every fix in this guide, gathered in one place. Each entry links to the full answer in its chapter — or type what you're seeing into the search box in the contents panel.

Creating your account and signing in

- "Invalid email or password" when logging in
- "Invalid verification code" when signing up
- "Invalid reset link" when resetting a password
- "This login isn't registered for CrewBook"
- The cookie banner has gone and you want to change your answer

Your company, the setup wizard and subscribing

- You were invited, but you see "Create your company"
- The setup wizard keeps reopening at every login
- "Run the setup wizard first to create your company settings..."
- Everyone suddenly sees the subscribe screen

Calendar

- The contract search says "No contract matches that."
- A job can't be dropped on a particular day
- "Failed to create job / move job / delete job — please try again."
- No green "+N" capacity number on a day

Day View

- A worker isn't in the Not on a job pool
- A plant item has gone red with "3/2"
- "Failed to save — please try again."
- "[Worker] is already on this job"
- Booking a split load charge books its material too

The job editor

- Plant changes disappeared
- "Updated this day, but N of M other day(s) on contract X didn't sync. Please refresh and retry."
- Rows in Job details won't open for editing
- The editor closed by itself
- Files uploaded from site but no email reached the office
- A note I typed isn't in the Saved notes list
- Saved a note but the office didn't get an email

WhatsApp job briefs

- "Failed to send to: ..." for some workers
- "No phone numbers found"
- No WhatsApp buttons anywhere
- The preview shows an error with a Try again link

Live job map

- A job is missing from the map

Holidays

- Approvals work but nobody receives the emails
- A pending holiday doesn't show on the Day View
- The Add button is greyed out

Wages

- A worker is missing from the wage grid
- A bank holiday shows as "Holiday" — or isn't paid at all
- Rate columns are missing, or blank in the download
- The link in an old wages email doesn't work

Absence & Cost report

- Days are listed but cost £0

- The total doesn't match the management accounts
- "Nothing for this period"

Expenses

- "For administrators" instead of the Expenses page
- No approval emails are going out
- "No petty cash claims to export for this month"

Mileage

- "Location access denied. Please allow in browser settings."
- No standard rate fills in for a company vehicle
- "Could not find one of the addresses"
- A claim came out lower than miles × 55p
- The confirm dialog quotes a different amount from the row
- "The 55p/25p split is in the claim notes but could not be saved on the journeys yet (MileageLog needs publishing in the Builder)."
- "The claim's value changed while you were reviewing it (another claim was made). Check the new figures and confirm again."
- "These journeys belong to 2 people (...). A claim is for one person..."
- "Could not count this year's business miles, so the claim cannot be checked against the 10,000-mile band. Close and try again."
- The Claim buttons are greyed out

Invoice checking

- "This supplier has no address for queries."
- "N invoiced costs were left out of the CSV. They are listed below: each needs a contract number."
- "CSV downloaded, but N records were NOT marked as exported..."
- "The draft is saved. No notify email is set in Sales settings..."
- The job window opened on the wrong tab
- There's no "Open this on its job in Day View" button on a query
- "Back to query" isn't on the job window

Costings — the monthly P&L

- Sales and profit columns show "Fetching the sales..." or dashes
- The Own plant column is all dashes
- "Freeze the accruals at this date" is greyed out
- An Accrual Log line shows "Record deleted"

Reports

- "Every purchase line in the app is counted, however old."
- A contract shows sales but its Profit is blank
- "No plant depreciation is set on the Costings page for ..."
- Plant-haulage rows export with no Supplier Ref

The Sales area

- There's no Sales in my navigation
- "The draft is saved. No notify email is set in Sales settings..."
- The Issue button is greyed out on a draft
- "N ticked days are already invoiced on #..."
- A client's balance looks split across two accounts

Integrations: WhatsApp, email, SharePoint

- "No Twilio credentials are configured..." on a test send
- "WhatsApp is connected but the message template SID is missing."
- A test send fails with a raw Twilio error
- Delivery status never updates on Message Delivery

Backups and restore

- "Backups aren't set up yet"
- "Backup stopped before writing anything: some of your data could not be read."
- "No backups yet" even after backing up

Message delivery

- A message shows "Unknown" instead of the worker's name

- Messages stay on "Sent" and never show Delivered or Read

Questions people ask

- What does CrewBook cost, and how does the trial work?
- Do my workers need their own logins?
- A page my colleague has is missing for me
- A job's been rained off — cancel, move or delete?
- Whose number do WhatsApp briefs come from?
- I've heard about Fleet, Training and Personnel pages — where are they?
- Can I get my data out?
- Where's the detail on leads, quotes, invoicing and credit control?

30. Questions people ask

- What does CrewBook cost, and how does the trial work?

Every new company gets 14 days free from the day it's created — no card needed, and the last day is included. After that it's £55/month for the whole company including VAT, unlimited users, cancel anytime. Adding office or site staff never raises the price. You can subscribe on the web or in the iPhone app, and either opens CrewBook everywhere — see the trial and subscribing.

- Do my workers need their own logins?

Only people who *use* the app need one. Crews can simply receive their WhatsApp job briefs on their phones — no login involved. For workers who do log in (to check their day, upload photos, log mileage), invite them as Site Staff and link the login to their record on the Crew page.

- A page my colleague has is missing for me

The navigation and More only show the pages your access tier and page chips grant. An Admin can fix it in **Settings → Users and access** — your row → **Permissions** → turn on the chip. Nothing has been lost; it's just not shown to you.

- **A job's been rained off — cancel, move or delete?**

If it will happen another day, **move** it (**Move day** ,  **Reschedule** or drag on the Calendar) — everything booked moves with it. If the day is simply lost, **cancel** it with a reason — it stays on the record, and can be reinstated. **Delete** only when the day should never have existed: it removes the job and everything on it.

- **Whose number do WhatsApp briefs come from?**

Your company's own WhatsApp business number, via your own Twilio account — so replies come to you, not to CrewBook. The one-off setup takes about 20 minutes: see integrations.

- **I've heard about Fleet, Training and Personnel pages — where are they?**

They're built but not yet released — they don't appear in anyone's navigation in the current version, whatever their tier. They'll show up as page chips in Users and access when they launch.

- **Can I get my data out?**

Yes. Wages, holidays, expenses, costings and invoices all export to spreadsheets; the Sales area exports Sage-ready CSVs; and nightly Google Drive backups (switched on in the setup wizard or Settings) export the whole database — restorable from the Backups page.

- **Where's the detail on leads, quotes, invoicing and credit control?**

The Sales area inside CrewBook is QCI — the same product as standalone CrewQCI. The Sales area covers how it joins onto your jobs; the full page-by-page detail lives in the CrewQCI user guide.

31. Getting help

The round  button at the top right of the app brings you back to this guide from any page — straight to that page's chapter. In the Sales area it opens the CrewQCI guide, where the sales pages are documented in full.

Stuck on something this guide doesn't cover, or found a snag? Email peter@edwardsapps.co.uk — you'll be talking to the person who builds CrewBook, and the answer usually ends up in this guide for the next person. The exact wording of any error message, and the page you were on, make a fix much quicker.

There's also a condensed  inside the app itself, and the legal pages (Privacy Policy, Terms of Service) live on the **Account** page. Both are tiles on More.
